PROFESSIONAL SUMMARY

Full-Stack Developer with 1 year and 10 months building production software for logistics and manufacturing. Experienced across React/TypeScript frontends, ASP.NET Core REST APIs and PostgreSQL/SQL Server, with hands-on work in transactional systems, ERP integration, RabbitMQ, Docker and IIS deployments.

TECHNICAL SKILLS

Frontend	React · TypeScript · JavaScript · HTML5 · CSS · REST API integration
Backend	C# · ASP.NET Core · .NET 7 / 8 · REST APIs · Entity Framework Core · Dapper · JWT · SignalR · Node.js
SQL & Databases	SQL · PostgreSQL · SQL Server · TimescaleDB · Relational design · Complex queries · Indexes · Transactions · Triggers · Row-Level Security · Migrations
DevOps & Tools	Docker · Docker Compose · IIS · Windows Server · Git · Gitea · CI/CD (Gitea Actions)
Integration	RabbitMQ · n8n · ERP integration · External APIs · Stimulsoft Reports

PROFESSIONAL EXPERIENCE

Full-Stack Developer — Grupolnnova	Apr 2025 – Present
Warehouse management (WMS/SGA): Developed complete features for a production WMS: stock and locations, goods receipt and dispatch, purchase orders, shipments, internal movements, adjustments and returns. Stock integrity: Implemented transactional backend logic in C# / ASP.NET Core (EF Core, Dapper) to prevent stock inconsistencies, duplicate operations and conflicts between concurrent processes. SQL & data modeling: Designed relational schemas and wrote complex SQL for PostgreSQL and SQL Server (foreign keys, indexes, transactions, triggers, migrations), using Entity Framework Core and hand-written Dapper queries. Operator interfaces: Built React + TypeScript screens for product scanning, physical goods validation, document status workflows and lot- and item-level traceability. ERP integration: Developed REST endpoints and sync processes with the SAIGON ERP for customers, suppliers, items, orders, delivery notes, locations and stock movements. Multi-site architecture: Contributed to multi-site support: active-site resolution from JWT claims via middleware, per-site data isolation with PostgreSQL Row-Level Security, and adaptation of endpoints and frontend. Automation & deployment: Integrated systems through RabbitMQ events, n8n workflows and external APIs; built Stimulsoft reports and labels; deployed applications to IIS / Windows Server and Docker with Gitea Actions CI/CD.	
Previously Software Development Intern at Grupolnnova (Jan 2025 – Apr 2025); hired as a developer afterwards.	

PROJECTS

ArcadiaWMS — Warehouse Management System	Live demo · GitHub
React · TypeScript · Node.js · PostgreSQL (Neon) · JWT	
Full-stack WMS with receipts, picking, transfers, adjustments and an immutable movement history. Stock operations run in SQL transactions with SELECT ... FOR UPDATE row locks, preventing negative stock and duplicate operations.	
ArcadiaDimension — Visual Warehouse Designer	Live demo · GitHub
React · TypeScript · Konva · Zustand · TanStack Query · Node.js · PostgreSQL (Neon)	
Canvas editor to design warehouse layouts at real scale, with racks, locations and a per-slot occupancy map. Autosave applies a minimal diff in a single transaction, with optimistic concurrency across sessions.	

EDUCATION

Higher Vocational Diploma in Web Application Development (DAW) — IES Abastos, Valencia	2023 – 2025
Higher Vocational Diploma in Administration and Finance — IES El Grao, Valencia	2021 – 2023
